# Market Share Analysis

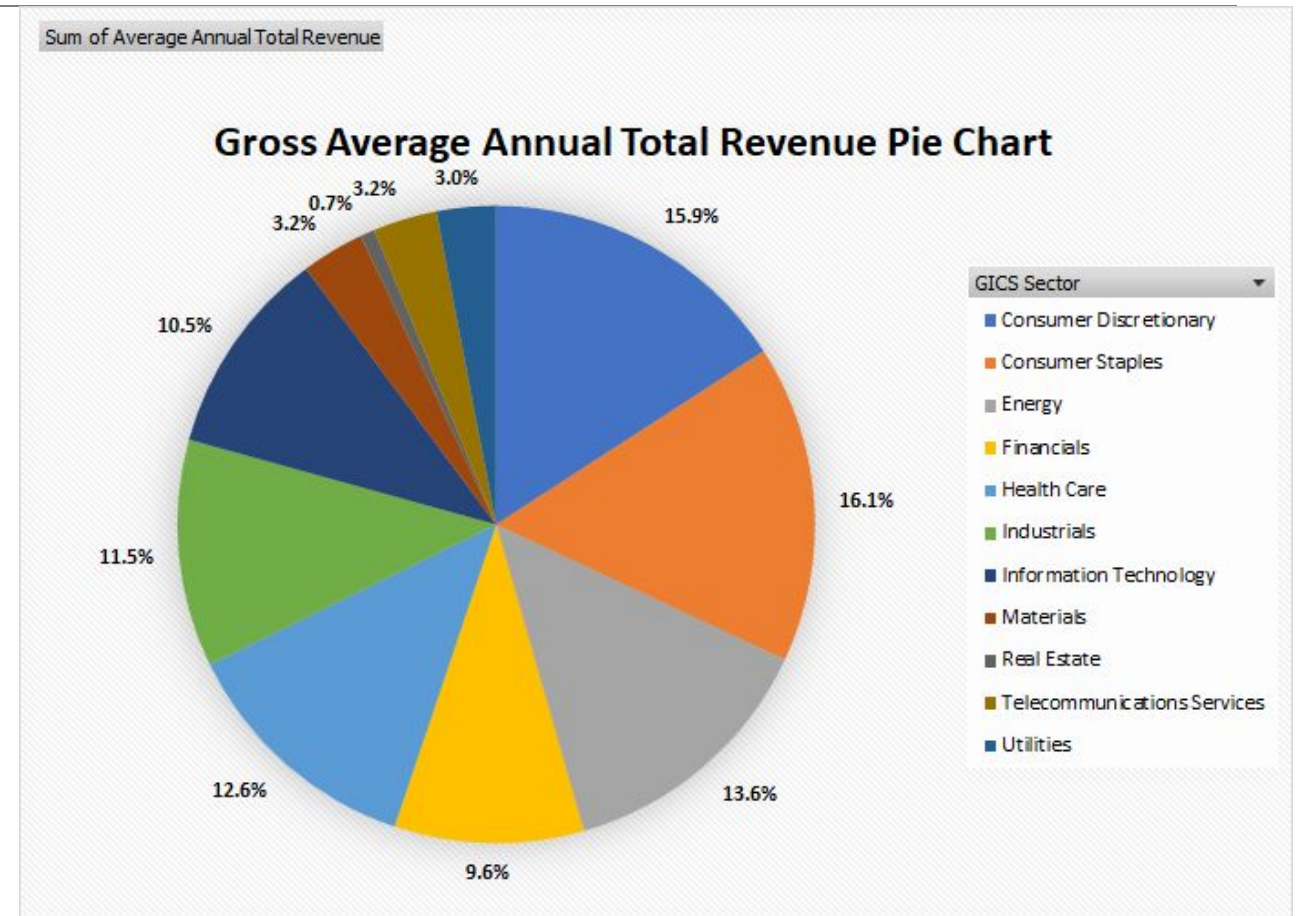

**Telecommunication Services is the industry where companies get the most average annual total revenue, which is**  
**\$ 57,537,392,650.00**

# Market Share Analysis

However, it does not mean that Telecommunication Services provides the most total revenue.

Consumer Staples still accounts for the most percentage of SPX 500, which is  
\$ 1,432,461,562,750.00

# Market Share Analysis

Why the comparison between Telecommunication Services and Consumer Staples is inconsistent on mean value and sum value ?

In the SPX 500, there are only 5 companies in Tele Services which suggests that those companies are oligopolies. While there are 33 in Consumer Staples, which is the reason that the market share of consumer staples is much larger than telecommunication. The standard deviations of tele and consumer staples revenue are \$ 58,457,084,123.88 and \$ 85,061,207,713.66 which is very reasonable because of the quite different amounts.

The average annual revenues are \$ 57,537,392,650.00 and \$ 43,407,926,143.94 separately. The median is \$ 18,100,500,000.00 and \$ 14,273,500,000.00. This means that in general tele companies earn more than consumer staples companies annually. But the range values are \$ 128,828,036,750.00 and \$ 478,135,926,250.00. This suggests there exists large difference among consumer staples companies.

(The arguments are only based on SPX 500 Data.)
